BOBBY FIL 120
Pre-Wound bobbin thread with core and no sides, 100% polyester.

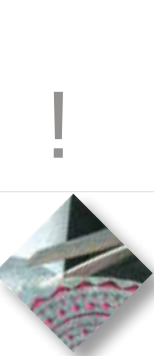

BOBBY FIL CORE MAGNETIC
Pre-Wound bobbin thread with core, magnetic on one side, no sides, 100% polyester.

Embroidery Nonwovens

STIFFY / TEXTI
Tear-away nonwovens are our standard embroidery nonwovens. A special fibre-structure technology facilitates horizontal, vertical and diagonal tearing of nonwovens and guarantees complete removal after embroidery, without leaving residues.

!
If the embroidery needs great stability, cut-away nonwovens are ideal, as these are known for having an extremely high resistance to perforation.

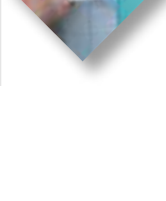

!
Stretch fabrics tend to get distorted during embroidering – that's why an iron-on embroidery non-woven is a must. The iron-on nonwoven is needed to provide a stable base for delicate and stretchy fabrics both during and after the stitching process and it prevents fabric distortion during stitching.

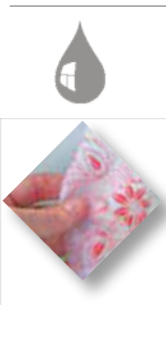

FILMOPLAST®
FILMOPLAST® is a thin pressure sensitive, self-adhesive tear-away nonwoven.

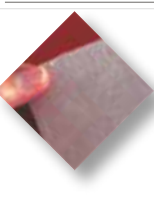

FILMOPLAST® STRONG
FILMOPLAST® STRONG is a strong pressure sensitive, self-adhesive tear-away

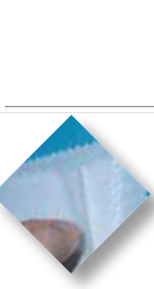

SOLVY FABRIC
SOLVY FABRIC is a water-soluble nonwoven which is used wherever backings should not remain on the finished garment. It is suitable for all fabrics which may be treated with water.

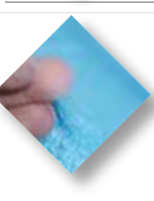

Foils and Gauze

KK FILM
Double-sided, self-adhesive film used for bonding two fabric layers temporarily. It prevents fabric distortion during sewing and embroidering.

BSN
Thermofoil for permanent bonding.

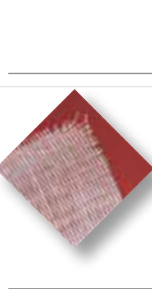

SOLVY
Special water-soluble foil to be placed on knit fabrics, terry cloth and other pile fabric types to be embroidered. It prevents stitches from disappearing in the fabric, with impressive embroidery results and flawlessly stitched images.

SOLVY Film 80
Special water-soluble foil for direct embroideries – completely filled-in embroideries like company logos, appliquéd logos and patches.

THERMOFILM
Heat-sensitive foil that is torn away after finishing the embroidery. Residues in the pattern can be ironed out with a household iron.

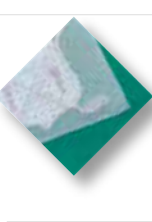

THERMOGAZE
Special heat-sensitive gauze made of viscose. Used for stabilizing embroideries and lace.

TS
Heat activated film for sealing needle punctures.

THERMOFIX
Adhesive fibres for permanent bonding. Speeds up appliqué work significantly

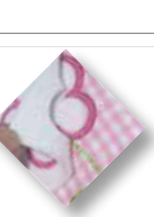

STICK PROTECT
Fusible protective gauze to be ironed on the back of skin-irritating embroideries.

Effect Fabrics

STEP (upon request)
Structured fabric in step-stitch optic with permanent nonwoven coating, used as backing material for appliqués.

PUFFY
Embroidery foam for three-dimensional embroidery effects.

CANVAY / TWILLY (upon request)
Durable twill fabric coated permanently with a firm, thicker nonwoven for patches.

CANVAY SOFT / TWILLY SOFT (upon request)
Durable twill fabric coated permanently with a soft, thinner nonwoven for patches.

FELTY (upon request)
Needle felt fabric in vibrant colours for embroideries, emblems and appliqués.
